

Easy Peel

Flair's LiDynamics lidding films program features a wide range of easy peel structures to meet your product, process & end-user requirements, and are designed for compatibility with most tray substrates.

Engineered with a wide operating window of 130-210°C, our easy peel films offer consistent processing experience that boosts efficiency and reduces downtime for cooling and roll changeovers. Combining strong seals through grease & residue, smooth peelability around the tray perimeter, and exceptional optics for product display, our films provide premium appeal for your products and easy-open convenience for your end-users.

Our products are FDA, USDA & CFIA compliant and are managed through our FSSC22000-certified food safety management system.

Options & Services

- Available in range of barriers, thicknesses & peel strengths
 - includes HPP structure for enhanced seal strength & flex crack resistance
- Custom printing with full graphics support & services
- Technical service & development for custom structures:
 - Foil, ALOXPET for retort
